				13 4 PCS  BUTTON HEAD SCREW M10 x 35	14 1 PCE  6MM HEX BIT FOR FRAME ASSEMBLY
					

STEP 1

Screw the feet (7) into the pre-drilled holes in the bottom of the adjustable legs (5).

STEP 2

Insert the adjustable leg into the leg assembly. Make sure they are all even - you can adjust later.

PRO TIP

Ensure the cross nut is facing dome-side out.

Insert the cross nut into the rail and thread the bolt through the leg frame into the cross nut.

STEP 3

Using the above method (but with the longer bolts (8)), insert the cross nut into the rail and thread the bolt through the leg assembly into the cross nut. Keep these bolts loose until all the other rails are installed.

STEP 4

Using the same method, insert the second leg assembly.

STEP 5

IMPORTANT: Brackets should be placed opposite the vices

Screw angle brackets into the leg frame on the inner top frame, using the metal self drilling hex head screws.

STEP 6

Screw the benchtop to the frame using the timber hex head screws
Screw the benchtop to the frame by screwing through the angle brackets into the bottom of the bench. Remember to centre the benchtop to the frame. The benchtop is heavy. You will need another person to assist.
